

AMBLYTECH®

The sustainable option for management of spider mites.

PRODUCT SPECS

Active Agent Neoseiulus (*Amblyseius*) *californicus*
Agent Type Predatory Mite

PRODUCT USES

Spider mites

Adult and nymphal stages of the predatory mites actively search for their prey and suck them dry.

BIOLOGY

AMBLYTECH® contains *N. californicus* (also called *Neoseiulus californicus*) adults, which are specialised predatory mites which feed on two spotted mites in all lifecycle stages. *N. californicus* adults are approximately 0.1 mm long and are translucent with colours ranging from pale orange to peach. The nymphs resemble the adults except that they are smaller and cannot re-produce. Eggs are oblong, transparent and white to dirty white in colour. Adult females are slightly larger than males and more oval in shape. *N. californicus* populations have slightly more females than males (66% female).

ACTION AND LIFECYCLE

AMBLYTECH® predatory adults actively hunt and consume two-spotted mites. An adult predatory mite can live up to 20 days, consuming an average of 1-2 eggs, 1-2 nymphs, or 1 adult mite per day. They can also survive for short periods by feeding on pollen, making them well-suited for preventative regimens.

Females can lay up to 4 eggs per day, averaging 43 eggs over their lifespan. The entire life cycle takes 4-12 days at a temperature of 21°C.

AMBLYTECH® DEVELOPMENT AND ACTION

INTRODUCTION METHOD

AMBLYTECH® is applied by sprinkling gently onto the crop. Hold the container in a horizontal position and rotate it gently to evenly mix the predators with the carrier material. Sprinkle the contents of the container on to the foliage.

RATE SCHED.	Dosage per m ²	Interval (days)	Frequency	PHI & REI
Preventative	25	14	-	0
Light Curative	100	7	3x	
Heavy Curative	200	5-7	5x	

ADVANTAGES OF AMBLYTECH®

- › **AMBLYTECH®** is complementary to **PHYTOTECH®**.
- › Can survive without any food for long periods – preventative application ideal.
- › Long term control of various species of pest mites.
- › All natural non-GMO product.
- › Can be used on both in-door and out-door crops.
- › Good at controlling low populations of mites.
- › Can survive under a wide range of climatic conditions.

BEST PRACTICE ADVICE

- › Use **AMBLYTECH®** to manage pest populations preventatively by targeting pests early in the season.
- › Use immediately upon receipt of biologicals.
- › Micro-humidity should be above 60% and temperature during the day should be around 25 - 35°C.
- › Avoid overhead irrigation for at least 24 hours after application.
- › Avoid using incompatible pesticides with this product.

STORAGE

Storage temp.	8-12°C
Conditions	Dark and dry
Do not freeze. Store horizontally in original unopened container.	

PACKAGING

Predatory mites as packed	
Quantity	Pack Size
25,000	400ml

IPM ADVICE

Before introducing **AMBLYTECH®** to your crop it is important that the plant is clean of negative chemical residues. Please consult the Bioline AgroSciences Africa SIDE EFFECT GUIDE on Dudutech.com for compatible chemicals.
