

MONTECH

Natural predators for the sustainable management of Thrips.

PRODUCT SPECS

Active Agent *Transeius montdorensis*
Agent Type Predatory Mite

PRODUCT USES

Thrips
Active between 15-40°C

Adult and nymphal stages of the predatory mites actively search for and feed on their prey.

BIOLOGY

MONTECH contains *Transeius montdorensis* predatory mites which feed on Thrips in their immature stages, and are also known to feed on Red Spider Mites. *T. montdorensis* are generally small, pale and pear shaped with a body size of between 0.3 – 0.5mm long.

MODE OF ACTION

MONTECH predatory mites actively hunt for and feed on their prey, including Thrips, whitefly, spider mites and hatching eggs, by crawling on affected plant leaves. The total life cycle from egg to adult is 7 days.

Adult females lay single eggs onto leaf hairs strategically among Thrips populations, eggs develop in 1 – 2 days. The larvae emerge and develop into protonymphs then deutonymphs which are also predatory, feeding on immature Thrips.

MONTECH DEVELOPMENT AND ACTION

MONTECH mites remain active up to 40°C.

ADVANTAGES OF MONTECH

- › Remains active under a wide range of temperatures, up to 40°C.
- › No resistance development.
- › No REI and PHI period required.
- › Can be used on both in-door and out-door crops.
- › All natural product; non GMO.
- › Not affected by day length.

INTRODUCTION METHOD

Gently sprinkle **MONTECH** onto the crop. Hold the container in a horizontal position and rotate it carefully to evenly mix the predators with the carrier material. Sprinkle the entire contents of the container on to the crop foliage.

RATE SCHED.

	Dosage per m ²	Interval (days)	Frequency	PHI & REI
Preventative	25	14	As required	0
Light Curative	50	7	3	
Heavy Curative	75	5 - 7	5	

BEST PRACTICE ADVICE

- › Use **MONTECH** to manage pest populations preventatively by targeting pests early in the season.
- › Use immediately upon receipt.
- › Micro-humidity should be above 60% and temperature during the day should be around 21°C.
- › This predatory mites cannot be used to manage Thrips where temperature is below 10°C, it can however maintain activity at temperatures of up to 40°C.
- › Avoid overhead irrigation for at least 24 hours after application.
- › Avoid using incompatible pesticides with this product.

STORAGE

Storage temp.	15-18°C
Conditions	Dark and dry
Max storage time	1-2 days

Do not freeze. Store upright in original unopened container.

PACKAGING

Predatory mites as packed	
Quantity	Pack Size
25,000	1000ml
150,000 Bulk Pack	5000ml

IPM ADVICE

Before introducing **MONTECH** to your crop it is important that the plant is clean of negative chemical residues. Please consult the Dudutech SIDE EFFECT GUIDE on dudutech.com for compatible chemicals.

If there are any questions about the product, please contact a Dudutech specialist in your area.
